Images via Yanko Design Here's a cool bike design idea: a variable frame that is adjustable in different modes for seamless, sustainable riding. For the city, you have a standard vertical mode - but once you're cleared of the city zone, lean back on country mode and pedal with ease. More photos and mock videos after the jump. From Janko Design: Bike up, then bike down. You sit on your bike vertically in the city and then set it up for a cruise in the suburbs. This is intuitive. It's crazy. This is a dissertation project. He has a video to go with him. He's been bullied. The final version will have a battery and hubmotor for a small kick in the pants. Eco-friendly urban and country transport on one bike. Each frame is adjustable under the weight of the rider. The rider can ride in any mode forever, but if the rider wants to move from one position to another, they just push the lock lever and lean forward or backward. The rider can change positions while continuing to ride a bike. This is proof of the concept of a layout for a suburban bike with a variable frame as part of the thesis of product-designers Daniel Knipfer and Stefan Wallmann at the University of Anhalt, Dessau in May 2008. In the concept, the frame can be locked by a lever on the steering wheel that the function is missing from the layout. In addition, the springs that help attract the rider upright must be adjusted with riders' weight to balance the frame (which allows you to switch positions by leaning forward or backwards). these springs are too weak in this prototype, so the riders in the video need to push the back a little. only a very light rider managed to educate himself by just leaning forward. Check out the video to see the design in action: And layout: Some data suggests lying on your desk is a better option than sitting at a 90 degree angle (although I found it challenging). This workspace has a desk that can be used on a chair or as a standing table. Dear Lifehacker, I can't decide between sitting in a regular desk chair, moving to a standing table,... MoreFlickr user Designcutter built this desk and racking system with IKEA poles-without fixing them! OT he room because it's a rental. Although it's a small, narrow space, there's a lot of flexibility in the room, with a monitor arm allowing you to browse anywhere in the room and of course that's a reclining option. You can see more photos of the minimalist workspace here below. If you have your own workspace to show, share them with us by adding it to our Lifehacker Workspace Show and Tell Flickr Pool. Make sure that any photos you include are at least 640x360. Keeping them up to 16:9 helps, too! Include a small text about the things you used as you came up with the design, and any other relevant If your clever organization and good sense of design catches the eye, you may be following a featured workspace. Minimum Workspace Design life life Classic Tech Support games I'm trying to enter the U.S. East on battle.net in diablo 2. I was literally just playing the game earlier today with no problem. When I log in to my login password, the following message appears: Diablo II has not been able to connect to the realm server. The area you choose may not be available or you may have trouble connecting. Please make sure your internet connection is working properly and/or your firewall has port 6112 open. I did an internet search for this error message and it seems a lot of other people have had the same problem. I came across a post that has a list of possible reasons the account may be temporarily banned. I didn't do any of the things on the list. It's pretty funny, to be honest. I bought the game so I could play it and not get banned from it literally for no reason what it was. I expect this to be considered immediately. This is totally unacceptable. 2 Loves the same here mate, can not connect to Bnet. If someone was able to find a way to fix it, please let us know I was having the same problem... I bought three sets of keys for my brothers and myself, and we all get this stupid Indialien error: Diablo II was unable to connect to the realm server. The area you choose may not be available or you may have trouble connecting. Please make sure your internet connection is working properly and/or your firewall has port 6112 open. Hello, this error occurs when trying to connect to the game using a proxy, VPN. You can disable the proxy or VPN connection, restart your computer and try again. If you have disabled a proxy or VPN and are still getting this error, please reply here with your ISP information and WinMTR trace. You can download these files to Pastebin and reply here with a Pastebin link using a preformat version of the text. I've been having the same problem for over a year. I've been trying to open a ticket for a few weeks to try to finally get it fixed. but I can't even get the ticket open I don't use a proxy or vpn or anything like that. I've tried on several PCs and multiple internet connections and get the same questions: no matter what. really wanted to fix I find unacceptable to be unable to play the game that I paid for let alone bought like 6 sets of d2 cdkys over the years. Now I use my diablo 3 collectibles ed copies of d2 and d2 lod. Im sorry but Blizzard support really went down the hill ive bought blizz games with warcraft one and had active WOW accounts since 2004. I had 2 active subtitles of my gfs and mine. but once again my gf had problems and we went around and around trying to get it sorted and eventually just canceled both of our submarines due to bad dunno why I even bother I know as ever sick will let down and not continue to be able to play the game I paid for. Hey k1ngk11a, this bug is very specific to use a proxy/VPN, so if you're sure you don't have a VPN installed check if you have a Windows/Mac proxy configuration and in case you turn it off as explained in the manual and restart the machine. If the problem persists, we will need your ISP name as well as the WinMTR trail. You can download it to Pastebin and reply here with a Pastebin link using a preformat version of the text. How to find out if I'm in a VPN, the second place where I live is an area far from the city. The way the Internet is provided is different. I've tried three Internet service providers, and the bug is the same. I've already done the proxy thing, and turn off the firewall. Where can I annex WinMTR? Tai for your help Hey Antidel2, you can provide your system files and winMTR trail that checks your way of connecting provider. You can download these files to Pastebin and reply here with a Pastebin link using a preformat version of the text. I also get this error. It was in the midst of a mooing. I'm no stranger to the timeouts we get to log in and log on too quickly, but it's never been the same. It only affects the realm I was on (USEast). I can enter the uswest just fine, so it's not a problem with my proxy/vpn (which isn't used anyway) as described by the blizz rep. it was 2 hours that goes beyond what these little timeouts are. I followed the instructions to check the proxy and as I knew it was not active. I also face the same problem @BwZ it faces. I can't access USEast with the error mentioned in the topic, but I'm successfully able to connect to USWest. the same thing here rakafella, happened about an hour ago for me. I have the same question on USEast... No VPN or proxy used, walked through the help manual listed by Shilmael above, and rebooted. Still not working. im having the same problem as 3 people and ahead of my post will post about it in another part of the forums? Same question I literally played 2 hours ago. I don't even have a VPN the same question. no vpn, no proxy. I can also get on uswest, but not useast. Hello, I don't know if you see this, but it seems to be a problem with The East of the USA 1, as with the same problem, I know that I do not use a VPN either. 1 How for the Realm Down issue the problem happens again this morning? Please let us know in the new theme as I close this old thread for the older Realm server issue. Page 2 12 Comments Page 2 Page 3 Diablo II General Discussion Anyone Else Seeing the Kingdom Down? The US west down for me also USWest is still down for me, was for more than 12 hours... I'm not sure what's going on, but it really sucks. :(I can't go in there anymore. He says that BNET does not respond to try again for a few minutes. It's been two days. Is it just me or is it a problem with BNET? I have the same problem. It was over 12 hours. It stays on the check version, the screen pops up saying: Battle.net does not respond, please try to connect again within Minutes. I would suggest you restart your computer... it can update the cache or IP connection etc. BN back to me last night. Realm Down: If You Get Realm Realm message, this means that the game can not reach diablo 2 servers, but the gateway server sends an automatic message to your client that the kingdom is not working. This usually occurs during scheduled stops (maintenance, ladder resets) and is much less common with unplanned ones. (system bean, network errors, etc.) Resolution: You just have to wait it out. If it's not planned to reset the ladder, then then there's a Diablo 2 Technical Support forums about it. No connection: If you are unable to see any part of the Diablo 2 server network blizzards at all, then you will receive a detailed message about you not connected to the Internet, check the modem, etc. This is due to the fact that diablo 2 servers are offline (also during the reset of the ladder), a redirected service break between the provider and the Blizzards provider, or you or your provider is offline. Resolution: If you are able to get online otherwise that eliminates problems with your system and provider and this will be something you will have to wait out. Go report a problem in Diablo 2 technical support forums. If there is no internet, first try the power of cycling router/modem, if nothing else, get on the horns with your provider. Version check: If you get a Version Check, then Blizzard doesn't respond, try again for a few minutes or you've been disconnected from Battlenet, please reconnect, there are two scenarios: 1. You just installed the game. Resolution: Try to work out the game as an administrator. Your firewall can block the game from the network, alt-tab and check if Windows Firewall encourages you to allow access. Any other firewall service, you're on your own. Another thing to try is manually patch games until the latest version: Blizzard Support Details of classic game patches, where to download them, and how to install the latest updates for classic games. 2. If you've been able to play in the past and run the Check version problem, it's usually due to the limitations of some kind. Here are some common reasons for the restrictions and duration depending on the cause. Shorter limits of up to 72 hours can be triggered by a number of things, including: in and out of Battle.net too many times in a short period of time. Switching between accounts or symbols too quickly. (Again, mooing, wait a few seconds on each screen) Making games too fast. (Agriculture, there is a limit of 20 games/hour, as well as 100 games / 12 hours) Switch skills too quickly with the mouse wheel. (Don't use the mouse wheel on Bnet.) Casting zero delaying skills like Frozen Armor, Glacial Spike and various necromanc curses repeatedly. Longer restrictions of up to two weeks primarily for two reasons: Playing on while you have an active VPN. (Most common two-week restriction) Play on Battle.net time of connection to a business class provider, public Internet access points, hotel/motel Internet connections and some cellular hotspots. Access. You just have to wait it out. With any restriction Blizzard will not delete them early for any reason. Blizzard Support List reasons for time constraints to play in Diablo II servers 1 How so is the west or is it these posters wroks for me, I heard they blow a lot of botter off it tho. Tho. diablo 2 realm down 2020. diablo 2 realm down july 2020. diablo 2 realm down 2019. diablo 2 realm down may 2020. diablo 2 realm down bypass. diablo 2 realm is going down. diablo 2 realm is going down in 10 minutes. diablo 2 how long does realm down last
